

Ivan Tan Yen Wen

Software Engineer

ivantanyenwen02@gmail.com | +6016 668-3670 | Telok Panglima Garang, Selangor
Portfolio Site | GitHub | LinkedIn

SKILLS

Technologies:	Go, TypeScript, Angular, Java Spring Boot
Backend:	REST APIs, Microservices, Clean Architecture (Layered Design), Asynchronous Processing, Background Jobs, Message Queuing (SQS), Caching (Redis), API Design, Distributed Systems
Databases:	MongoDB, PostgreSQL, Oracle
Cloud/Deployment:	AWS (ECS, Lambda, SQS, S3, ElastiCache), Docker, GitLab CI/CD

EDUCATION

Taylor’s University, Subang Jaya, Selangor	August 2021 - August 2024
Bachelor of Computer Science (Honours), First Class Honours	CGPA: 3.9/4.0
Student Exchange Programme at Manchester Metropolitan University, Manchester, United Kingdom (January - June 2023)	
University of the West of England, Bristol, United Kingdom	August 2021 - August 2024
Bachelor of Science, Computer Science, First Class Honours (dual award with Taylor’s University)	

EXPERIENCE

Software Engineer II Payments Network Malaysia Sdn. Bhd. (PayNet)	March 2025 - Current
- Developed backend microservices in Go for PayNet’s One Stop Portal (OSP), delivering on two of PayNet’s 2026 Shared Goals — Unified Dispute Management Portal and NextSwitch Migration — supporting critical national payment infrastructure including DuitNow, MyDebit, and SAN payment schemes. - Contributed to the design and implementation of the workflow engine and refund verification mechanism for the Unified Dispute Management Portal, participating in backend system and business logic design discussions. - Rebuilt the National Addressing Database (NAD) maintenance, Cross-Border Participant Management, and DuitNow Transaction Search modules as part of the DuitNow NextSwitch migration, redesigning the underlying data models and workflows for the new switch infrastructure. - Developed several modules for PayNet’s participant dashboard (PayNet Hub), including participant onboarding portals, file publication systems such as PayNet Circulars and Events, and participant communication systems such as PayNet Mailer. - Designed and built a core e-mail notification engine using AWS SQS for asynchronous, decoupled message delivery, and contributed to and maintained a centralized audit trail system integrating AWS CloudWatch and Kinesis for real-time log ingestion — both adopted across multiple internal PayNet services. - Deployed and maintained production services on AWS with GitLab CI/CD, resolving deployment failures and IAM permission issues across services, and monitored uptime via Site24x7. - Contributed to AWS cost-savings initiatives through ECS task rightsizing, migrating workloads to Graviton (ARM) instances and Fargate Spot, and code-level optimizations to reduce memory usage, reducing cloud costs by 20%.	
Web Developer (Intern → Full-Time) Continental Tyre (PJ) Malaysia Sdn. Bhd.	April 2024 - December 2024
- Contributed to the ContiOnlineContact (COC) APAC Enhancement project, a digital online dealer portal used across Continental Asia markets, progressing from intern to full-time engineer as part of an Agile development team. - Built end-to-end features using Angular and Java Spring Boot across multiple modules, including Order Placement, Bundle Sales, Order Cancellation, Payment Advice, Financial Reports, and Mobile Push Notifications. - Engineered an automated solution to replace the existing Bundle Sales process, which required manual email exchanges, enabling customers to directly select and purchase bundles online and significantly improving efficiency and customer experience. - Implemented modern UI designs across the COC APAC Enhancement project — including Order Creation, Shopping Cart, and Reports Page — replacing the outdated, hard-to-navigate legacy interface with a redesigned experience. - Integrated with legacy SAP systems via SOAP web services and internal systems via RESTful APIs, ensuring efficient data flow across frontend and backend systems. - Supported application deployment and maintenance in production, working with CI/CD pipeline tools such as Jenkins and ArgoCD.	

PROJECTS

WashCubes — Smart Laundry Locker System	September 2023 - March 2024
- Led a team of 5 as team leader and backend developer for a smart laundry locker system built for an external industry client as part of a university Capstone (Final Year) project, consisting of user and rider mobile apps, a web admin dashboard, and a backend service. - Constructed the backend server using Node.js and Express, exposing REST APIs and MongoDB-backed data storage shared across all client applications. - Contributed across the user, rider, and admin dashboard interfaces built with Flutter and Dart, supporting order creation, tracking, and operator/admin management workflows. - Coordinated project planning, task delegation, and client requirement gathering as team lead throughout the project lifecycle.
